

FLORIDA PRODUCTION ENGINEERING INC.,
SUBSIDIARY OF E.G.I. INC.

March 3, 2008

To whom it may concern,

The system at our facility is a four open tower, two tank (chilled and process) system with water capacities of 3,000 gallons in the towers and 5,500 chilled/process tanks. Independent testing confirms the results in the Griswold Water Systems Monthly Performance Report. The entire system has seen a tremendous improvement. We no longer have slime in the system, the foul odor is gone and the turbidity is that of drinking water. Heat transfer efficiency has improved dramatically in our injection molds and the molding machines. Down time because of water issues has been eliminated. It's easy for me to sit back and reflect now, but I had to convince all of the internal water "Experts" on staff that there maybe a better way, and our business is not water treatment but OEM automotive manufacturing. Everyone had an opinion on chemical treatment systems they had used in the past and that no water treatment system could deliver these "pie in the sky" results. The "Experts" were convinced I was setting myself up to fail. I stood my ground and moved forward with the purchase and installation. The team at Griswold helped every step of the way. Keeping us on track and achieving the success we have to date. The customer support is great and the core competence of this company is very strong. In closing water issues are no longer a topic of discussion at FPE Ormond.

John Porto
